Made in Europe. Compliant with EU Standards

Our device is proudly developed and manufactured in Europe — on a certified production line in Italy — and fully complies with all relevant EU regulations. This guarantees not only high safety standards, but also full legal clarity for distributors, installers, and end users.

- **1. Built-In Safety** — [Low Voltage Directive 2014/35/EU]

Designed with safety in mind: full protection from electric shock, overheating, and short circuits. All live components are safely insulated — peace of mind built into every unit.

- **2. Interference-Free Performance** — [EMC Directive 2014/30/EU]

Thanks to advanced EMI filters, our controller works reliably in any environment without disrupting nearby electronics — stable performance in both homes and industrial settings.

- **3. Eco-Friendly by Design** — [RoHS Directive 2011/65/EU]

No harmful substances. We've eliminated lead, mercury, cadmium, and other hazardous materials — a cleaner choice for people and the planet.

- **4. Trusted for Everyday Use** — [EN 60335-1 and EN 60335-2-xx]

Engineered for long-term use in real homes. With fire-resistant materials and protection from overheating, it's as safe as it is smart.

- **5. Smarter Energy Use** — [ErP Directive 2009/125/EC]

Our smart controller helps you cut energy bills and reduce carbon footprint — perfectly aligned with the EU's green energy goals.

- **6. Certified and Ready** — [CE, Declaration of Conformity]

Each unit comes CE-marked and backed by a Declaration of Conformity from our European manufacturing partner — your assurance of compliance and quality.
